The FA-501 Large Overhead Array is our most popular design. It is also our most versatile array with the greatest ability to adjust the audio focal point which is completely configurable via an on-board control panel. A fabric cover is provided, standard is black with other colors available. Logos or designs can be printed on the face of the fabric.

Our one of a kind technology allows us to design arrays and provide coverage patterns that just aren't available with other technologies.

Dakota Audio arrays consist of multiple small, high quality loudspeakers providing excellent sound quality and control in thin unobtrusive packages.

Using our exclusive digital signal processing technology, these speaker arrays provide high quality sound combined with excellent sound control in a package that is barely visible when deployed.

The arrays are easily field adjustable for both mounting height and pattern width via a control panel mounted to the unit.

Please visit www.dakotaaudio.com or contact us to learn more about the many different array enclosures and successful applications for Dakota Audio Focused Speaker Arrays.
