The MA-4 Mini Array is designed for use with flat panel technologies consistent with digital signage, kiosks, or trade show displays. They range in size from 18" to 38" in length. The audio pattern is controlled side to side with a very wide vertical pattern to accommodate listeners of varying height. MA-4's are ideal for isolating signals between side by side displays producing different content.

Our one of a kind technology allows us to design arrays and provide coverage patterns that just aren't available with other technologies.

Dakota Audio arrays consist of multiple small, high quality loudspeakers providing excellent sound quality and control in thin unobtrusive packages.

The audio signal is delivered to the MA-4 via a multi conductor cable (included) that attaches to the included amplifier that can be mounted remotely. The amplifier is powered by a wall transformer (included).

Custom Bessel or Line arrays (MA-5) are also available for integrated or OEM speaker applications and include an amplifier.

Please visit www.dakotaaudio.com to learn about our many other arrays that provide multi-dimensional sound control that can be mounted overhead or under your feet!
